github.com/cesgrn

EPFL Computer Science student with strong quantitative and systems foundations, targeting quantitative research and systematic trading internships. Built an independent four-project ML × Finance research series covering price prediction, NLP on earnings calls, reinforcement learning for derivative hedging, and implied volatility surface modelling. Swiss B permit — authorized to work in Switzerland. Available June to August 2027.

TECHNICAL SKILLS

Languages: Python, C, Java, Scala, Verilog, RISC-V Assembly, LaTeX

ML / Quant: PyTorch, scikit-learn, NumPy, Pandas, XGBoost, FinBERT, Reinforcement Learning (PPO)

Mathematics: Probability & Statistics, Optimisation, Linear Algebra, Signal Processing, Algorithms

Tools: Git, Excel, Overleaf

SELECTED PROJECTS

ML × Quantitative Finance Research — [Personal](#) — github.com/cesgrn 2026

- › Four-project series exploring ML alpha generation: equity price prediction (XGBoost), NLP sentiment on earnings calls (FinBERT), RL derivative hedging (PPO vs Black-Scholes), neural network implied volatility surface modelling.
- › Methodology inspired by research from JP Morgan, NeurIPS and Quantitative Finance journal.

NanoGPT — Transformer LLM from Scratch — [Personal](#) — github.com/cesgrn 2026

- › Full GPT architecture in PyTorch: multi-head self-attention, residual connections, layer normalisation, feed-forward blocks. ~10M parameters trained on Tiny Shakespeare.

Mini RISC-V Processor — [EPFL](#) — github.com/cesgrn 2025

- › Designed and simulated a CPU pipeline in Verilog. Implemented full instruction execution, memory management and interrupts in RISC-V Assembly.

Personal Finance & Quant Tracking — [Personal](#) — github.com/cesgrn 2025

- › Python scripts for automated market trend tracking (stocks & crypto). Personal portfolio with risk analysis, DCF fundamentals and financial statement reading.

EDUCATION

BSc Computer Science & Communication Systems — [EPFL](#) — [École Polytechnique Fédérale de Lausanne](#) Sept 2024 – Present

- › Elite engineering programme taught entirely in English. Core quantitative coursework: Machine Learning, ML for Signal Processing, Algorithms, Probability & Statistics, Computer Systems, Cybersecurity, Mathematical Analysis.
- › Technical stack: Python, C, Java, Scala, Verilog, RISC-V, LaTeX.

Exchange Year — [DTU](#) — [Danmarks Tekniske Universitet, Copenhagen](#) Sept 2026 – June 2027

- › One-year academic exchange at one of Europe's leading technical universities. Fully English-taught, international environment.

French Baccalauréat — Highest Honours (Mention Très Bien) — [Lycée Sainte-Marie, Lyon](#) 2021 – 2024

- › Specialisations: Mathematics, Physics-Chemistry, Economics & Social Sciences.

EXPERIENCE

Logistics Staff — [Forum EPFL](#) — [Largest student recruitment forum in Switzerland](#) Oct 2025

- › Operational coordination for 150+ partner companies including major banking, consulting and tech firms. Daily interaction with finance and trading professionals.

Supervision Staff — [PolySI](#) — [EPFL Integration Week](#) Aug 2025

- › Led and supervised groups of incoming students. Managed activities, logistics and unexpected situations at scale.

- › Cross-departmental rotations. Exposure to corporate finance: revenue mechanisms, budgeting, cost analysis and procurement.

LANGUAGES

French Native

English Fluent (EPFL education & certificate)

German Intermediate

INTERESTS

Quantitative finance & systematic trading · Financial markets (equities, derivatives, crypto) · Competitive skiing · Weightlifting & martial arts · Electric guitar & piano
